PROJECTS

Transforming Healthcare with AI-Powered Disease Prediction Based on Patient Data

- Developed a machine learning model to predict diseases using patient health data.
- Applied data preprocessing and feature selection techniques to improve model performance.
- Implemented classification algorithms for early and reliable disease prediction.
- Designed the system architecture to support data-driven healthcare decisions.

Intelligent Cloud Resource Monitoring and Cost Optimization Platform (Ongoing)

Technologies: Python, Cloud Computing, Data Analysis

- Developing a platform to monitor cloud resource utilization and performance, aimed at identifying cost-saving opportunities across cloud infrastructure.

HACKATHONS

Nimirnthu Nil Hackathon – EDII-TN

Project: Newborn Baby Monitoring & Hospital Visit Management System

- Participated as part of a team and successfully cleared three rounds of shortlisting, demonstrating teamwork, innovation, and problem-solving skills.
